Meeting Jun 16, 2025 at 19:14 GMT

Meeting records  Transcript

Summary

Gunnar Örn Arnarsson provided Genesis Program with a dashboard overview showcasing features for logging meals, fasts, and symptoms, and Genesis Program discussed their focus on longer autophagy-related fasts. Genesis Program suggested offering structured 12-month programs with predefined fasting durations and tracking weekly animal meat consumption and carb frequency with "standard" and "animal" diet options. Gunnar Örn Arnarsson also proposed incorporating user feedback indicators during fasts.

Details

- **Dashboard Overview and Functionality** Gunnar Örn Arnarsson provided Genesis Program with a walkthrough of the application dashboard. The dashboard allows users to get an overview and add meals, snacks, symptoms, or fasts, including past entries ([00:03:36](#)). Gunnar Örn Arnarsson demonstrated how adding a meal resets the fasting timer and how logged symptoms would be associated with a fasting period ([00:04:45](#)).
- **Fasting Log and Scheduling Preferences** Gunnar Örn Arnarsson explained that the app automatically logs fasting durations, which can be edited and filtered ([00:05:58](#)). Genesis Program indicated they primarily focus on autophagy from 24-hour fasts and longer, suggesting that intermittent fasting logging might not be a priority for them initially. They discussed the potential for a fasting schedule feature to keep users on track with notifications for upcoming fasts and preparation tips ([00:06:51](#)).
- **Defining Initial Fasting Options and Program Structure** Genesis Program suggested offering a selection of initial fast durations (24, 36, and 48 hours), with longer fasts becoming available progressively ([00:09:17](#)). They discussed the idea of creating structured programs with 12-month horizons, where fasts are scheduled, and the app provides reminders ([00:10:31](#)). Gunnar Örn Arnarsson proposed having different programs for various user groups, and Genesis Program agreed to write out details about the fasts, pre-fast, post-fast, and during-fast guidelines to integrate into the app ([00:11:31](#)).

- **Dietary Tracking Features** Genesis Program specified that the key dietary metric to track is pounds of animal meat consumed per week ([00:12:30](#)) ([00:15:41](#)). They also requested a simple way for users to log carbohydrate meals to track carb frequency, proposing "standard" and "animal" as the primary diet type options, removing "keto" ([00:13:31](#)). Gunnar Örn Arnarsson confirmed the feasibility of adding a feature to track pounds of animal meat ([00:14:52](#)).
- **Potential Autophagy Indicators** Gunnar Örn Arnarsson mentioned the possibility of including indicators to give users feedback on their progress during a fast, such as hunger levels or a general sense of how they are doing ([00:15:41](#)). Genesis Program found the idea of indicators helpful and asked Gunnar Örn Arnarsson to suggest specific indicators for implementation. Genesis Program agreed to compile the discussed details and follow up with Gunnar Örn Arnarsson the next day ([00:15:41](#)).

Suggested next steps

- ☐ Genesis Program will include tracking for pounds of animal meat per week and carb meal logging in the information.
- ☐ Genesis Program will add ideas for indicators to the sheet and call Gunnar Örn Arnarsson again tomorrow after typing it up.
- ☐ Genesis Program will write out the fasting schedules, including pre-fast, post-fast, and during-fast guidelines, and send it to Gunnar Örn Arnarsson.

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)
